

## Male Standard Stage Makeup

1. Apply foundation overall.  
( Don't forget under chin, neck, hairline, ears, etc.)
2. Contour as needed (under cheek bone is shown above, but any contouring can be done at this time as needed to further define eyes - lids, shorten or lengthen nose, define chin, etc.)
3. Apply blush to "apples" of cheeks.
4. Define eyes with liner. Do not go beyond outer corners unless needed for characterization.
5. Do define eyebrows if not prominent.
6. White in corner of eye (optional) creates a more "alert" appearance.
7. Color lips neutral brown-pink or other suitable color to match own "blooded" flesh tone.
8. Apply translucent powder to finished face to "set" and remove all shininess.
